FUNCTIONALITY UPDATE

NEW ENHANCEMENT TO EVISIGN; GEOLOCATION (II)

Second parts were never good, except this one!

A few months ago we launched the release of a new feature in EviSign; geolocation.

We want to be more precise when showing the geolocation of the signatory, so we have improved this function, now you will be able to see the coordinates and many more details of the geolocation.

Stay a little longer to find out all the new details.

WHAT GEOLOCATION DETAILS WILL BE ADDED WITH THE NEW UPDATE?

From now on, in addition to (1) the signatory's technical identification data in the Affidavits, you will also be able to see (2) the signatory's name, declaration of intent, notification address, IP, coordinates and location description (you will obtain the signatory's geoposition with greater accuracy).

SIGNER TECHNICAL IDENTIFYING DATA

Actor description: Registered signer and in session

Identification method: Registered user, authenticated by login and HandWriting signing method
